

Embed Linklist For Drupal.

The list includes [added links](#), keywords and description. The list can be embedded on a blog page or web page by copying the code shown below.

Copy code and paste it on a website or blog.

[How to embed Linklist for Drupal - Video guide](#)

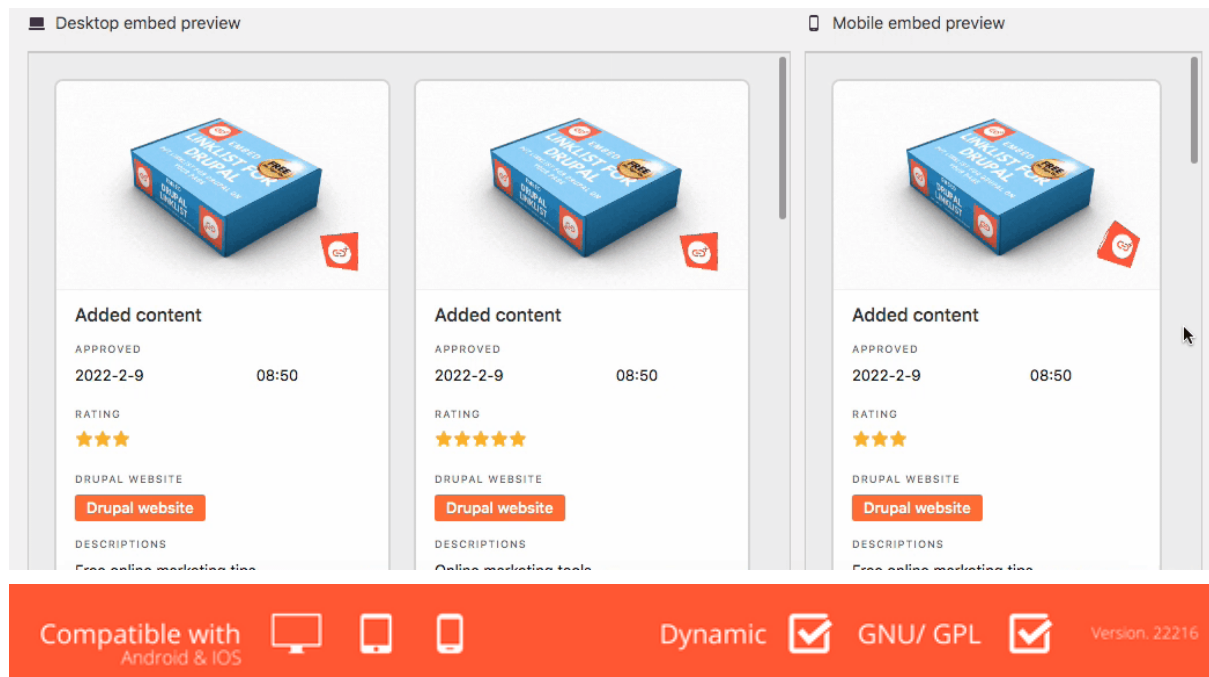

```
<iframe class="airtable-embed"
src="https://airtable.com/embed/shroNCbEnuVnScV7H?backgroundColor=orange"
frameborder="0" onmousewheel="" width="100%" height="533" style="background:
transparent; border: 1px solid #ccc;"></iframe>
```

Yes!

It takes time with SEO.

And the only thing you can do about it is to like it...

What can you achieve?

- Create a directory with the ability to customize layout options for the website.
- Build links to your site.
- Build internal links and improve SEO.
- Increases the visibility of your website.
- Monitor and generate incoming traffic to your website.

What do you get?

- A very powerful link directory that is constantly updated.
- Function buttons that offer directory visitors to: 1. embed the directory, 2. add a link, 3. send a PING and 4. several feed/ xml/ rss integrations.
- Added links are integrated in Gmail for ("Google indexing").
- Added links are integrated in several Wordpress blogs for purposes of getting indexed in search engines.
- Multiple Time Triggers (24/7/365) - Informative content is posted in Wordpress blogs every time a certain number of hours have passed and every time a visitor visits the directory. The super administrator is informed via Gmail, which means that the information becomes available on Google's servers, which has a positive seo effect. **(New function)**

Get your directory up and running in minutes by installing the script!
